Scintillator Digitization

Yusuf O Gunaydin
12.12.2008

There were some bugs in ScintDigitizer.cxx file that was created a Scint digit for every charged particle that passes through the scintillator and it is fixed. After that, I got ADC Digits plot with updated file which is below. I need to tuned it up.

Track Position

- If the DST has the track position at the front face of the Scint it is going to be useful.
- Since, by this way we can verify ScintDigitizer.

ScintDigitizer Status

ScintDigitizer has not completed yet. After tuning up it I'll compare ADC plots from real data and monte carlo file. Then, if smearing is needed, I'll do it.
